Product Description
Provides protection for waterproofing systems and managing subsurface water around building foundations. Soil backfill is retained while allowing water to pass into the drainage system providing hydrostatic relief. Collected water is then conveyed to AVM Bottom Drain 6" or AVM Bottom Drain 12", or other collection systems.

Consists of an impermeable polymeric sheet cuspated under heat and pressure to form a high flow dimpled drainage core. The core is then bonded to a layer of nonwoven filter fabric. The filter fabric retains soil or sand particles as well as freshly placed concrete or grout, allowing filtered water to pass into the drainage core.

Where to Use
AVM Drain Board 6000/6200 is ideal for use with foundation walls, retaining walls, planters, roof gardens, bridge abutments, and under slabs.

AVM Drain Board 6000 / 6020
Maintains a very high flow rate while providing a higher compressive strength for greater depths. A very popular choice for vertical and horizontal single sided drainage applications. Moderate duty.

AVM Drain Board 6000XL / 6020XL*
Designed for extra heavy duty vertical and horizontal applications that demand greater compressive strength and improved filtration for challenging soil conditions. Heavier duty drain core & fabric.

* 6020 and 6020XL are identical to 6000 and 600XL with the addition of a membrane protective film on the back side.

Delivery, Storage, and Handling
a. Packing and shipping: Provide materials in original unopened containers with manufacturer’s labels intact and legible.
b. Acceptance at site:
   1. Unload materials; check for damage.
   2. Damaged materials determined by visual inspection will not be accepted.
   3. Remove rejected materials from site immediately.

b. Storage and protection:
   1. Store materials in dry area in manufacturer’s protective packaging with labels and installation instructions intact.
   2. Store materials under cover, off ground; protect from sunlight.
   3. Transmissivity or Flow Q with hydraulic gradient of 1 with confining stress indicated in MANUFACTURED UNITS Article in accord with ASTM D4716-01

Project Conditions
1. All surfaces to which the Drainage Boards are applied to must be clean, sound and stable enough to properly attach and hold onto the drain boards being installed.
2. Warn personnel against hazards of working with this product. Sharp edges, weight, etc. Note other hazardous conditions on the job that might require special attention or extra protective gear and or any other special protective or safety procedures.
3. Protect adjacent surfaces which could be damaged during the application procedure.

Inspection of Substrates
1. Verify 1% slope to underslab collection pipes or site water drainage system at underslab drainage system location substrate.
2. Examine conditions and substrates where products specified in this section are installed; submit written notification of unacceptable conditions or substrates.

System Application
Refer to installation instructions.

Quality Control
a. Visually inspect all drain board surfaces to ensure a full and proper drain board system application, especially at corners, drainage footings and other hard-to-reach areas.
b. All unsatisfactory areas shall be repaired prior to final acceptance.

Protection of Installed Work
Always protect the waterproofing and drainage system until fully covered with dirt, concrete, shotcrete, etc.

Availability and Cost
Contact AVM Industries or your approved applicator for pricing and availability.

Technical Services
Technical services are available by contacting our offices at 888.414.1041 or 818.888.0050 or visit www.avmindustries.com

Notes:
- AVM Drain Board 6000 in 4' and 6.5' widths are stocked items.
- All other drain board versions are “Special Order” items. Allow 2 weeks lead time for special order items.
- For pricing and availability of special order items, please contact AVM Industries or your local distributor.
